SUMMARY

Frontend Engineer specializing in performance-critical, accessible web apps for fintech platforms. Led rendering optimizations that lifted Lighthouse scores from **72** to **96+** across production applications serving **1,500+** users, while driving design-system adoption via Storybook and Radix UI. Focused on shipping fast, resilient, and inclusive user experiences at scale. Experienced with owning features end-to-end, from component architecture to production monitoring.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, SASS, Python

Frameworks: React.js, Next.js (App Router)

State & Data: Redux / Redux Toolkit, TanStack Query, REST APIs, GraphQL

UI & Styling: Tailwind CSS, Radix UI, Storybook, CSS Modules, Responsive Design

Testing, Tooling & Practices: Jest, React Testing Library, Vite, Webpack

WORK EXPERIENCE

TIAA Pune, India

Frontend Engineer *Jul 2023 - Present*

- Architected a multi-step, real-time asset **Proposal engine** (**React 18**, **TypeScript**, **Redux Toolkit**) from scratch, replacing a fully manual paperwork process and cutting proposal turnaround time **60%** for financial advisors.
- Diagnosed and eliminated **rendering bottlenecks** across production applications via **code splitting**, **dynamic imports**, and **memoization** — lifting **Lighthouse performance scores from 72 to 96+** and measurably improving load times for advisor-facing tools.
- Shipped **4 production financial applications** end-to-end — including the Advisor Portal and Signup workflows — with **mobile-first**, **responsive architecture**, supporting **1,500+ active financial advisors**.
- Engineered the frontend for an enterprise **Pricing Exception platform** used in compliance-sensitive pricing workflows, reducing manual review time **55%** and giving sales, product, and compliance teams a single **system of record**.
- Established **test coverage** discipline across critical modules — authoring **210+ unit and integration tests** (**Jest**, **React Testing Library**) to reach **80%+ coverage** and reduce regression risk in production releases.
- Led the build out of a reusable, **accessible component library** (**15+ variants** in **Storybook**, built on **Radix UI** and **Tailwind CSS**), standardizing UI patterns org-wide and accelerating sprint velocity **35%**.

TIAA Pune, India

Software Engineer Intern *June 2022 - Jul 2022*

- Engineered a centralized internal **recruitment management portal** (**React**, **TypeScript**, **REST APIs**) from the ground up, eliminating team-wide reliance on legacy Excel-based tracking and consolidating candidate data into a single **system of record**.
- Built an **administrative dashboard** with **real-time debounced search** and **dynamic multi-filter** capabilities, reducing candidate screening effort by **30%** and accelerating recruiter turnaround on high-volume hiring cycles.

SELECTIVE PROJECTS

CineScout — Media & Discovery Platform | *React, TypeScript, Next.js, TanStack Query*

* Built a **high-performance streaming discovery platform** with **server-side rendering**, **dynamic routing**, and **instant search**, modeled on production media catalog apps like Netflix and Prime Video.
* Integrated **TanStack Query** for **background caching** and **optimistic UI updates**, cutting redundant network requests by **70%** and improving initial page load time by **1.2 seconds**.

Bill Generator — Invoice Creation Tool | *React, JavaScript, jsPDF*

* Built a **client-side invoice generator** enabling users to add itemized line items, configure **quantity**, **tax rates**, and **discounts**, with **real-time total calculation**.
* Implemented **client-side PDF export** using **jsPDF**, converting rendered invoice previews from **canvas to downloadable PDF** documents without any backend dependency.
* Deployed and hosted the application on **Netlify** for public access and **continuous delivery** on every commit.

Real-Time Collaborative Dashboard | *React, TypeScript, Redux Toolkit, WebSockets, Radix UI*

* Designed a **real-time collaborative dashboard** rendering **live multi-user data feeds** via **WebSocket connections**, inspired by concurrent-editing tools like Figma and Notion.
* Engineered **custom hooks** for **window virtualization** and **state batching**, sustaining smooth **60fps UI performance** under heavy, high-frequency data bursts.

EDUCATION AND CERTIFICATIONS

- **Education:** B.Tech in Computer Science & Engineering | *PES University - Bangalore*
- **Certifications:**
  * AWS Certified Developer | *Amazon Web Services*
  * Meta Front-End Developer Professional Certificate | *Meta*
  * CI/CD Professional Certificate
  * Ultimate Advanced React Architecture | *Udemy*
